**Object: declaration on Jalupro Glow Peel color change**

To whom it may concern,

we, Professional Derma S.A., located in Riva A. Caccia 1/d, 6900 Lugano – Switzerland, hereby declare that we have changed Jalupro Glow Peel formula by removing the blue dye (CI42090) that was only meant to ensure an appealing appearance of the cosmetic product. Even if widely prevalent in the cosmetic industry and deemed safe for use on skin and hair, the regulatory status of the colorant in question is still debated in some countries worldwide and it is not everywhere allowed as a cosmetic ingredient. For this reason, the component CI42090 has been recently removed from the formulation of Jalupro Glow Peel, without having any change in its mode of action, hence performance. The solution should now appear colorless or slightly yellowish. Professional Derma declares that Jalupro Glow Peel has not undergone any other significant change, and it features the very same characteristics in terms of safety and performance as before the modification above outlined.

Sincerely,

PROFESSIONAL DERMA SA  
Riva Caccia 1D
